# Table of Contents

## Basic Slides

Overview

Figures, columns and math!

## Beamer Specific Features

# Things you should know!

- 1 You must use Lua $\text{\LaTeX}$  as your compiler. There's two reasons why:
  - You need either Xe $\text{\LaTeX}$  or Lua $\text{\LaTeX}$  for custom fonts
  - Xe $\text{\LaTeX}$  bugs out with the text color if you use notes. (It's white for some reason??)

Even larger text

Huge text

Hugest text

# Check out the section label!

This is that subtitle I mentioned.

This is the basic presentation template.

- 1 The heading starts on top.
  - You can set a subtitle using `\framesubtitle{}`
  - The text will automatically center for you
- 2 There are two color modes
  - Light Mode
  - Dark Mode
- 3 This is also an example of the itemize environment.

*Contact me if you have questions!*

# Here is an example of a frame using math.

The math font works pretty well! I like spheres.

Here is the surface area of a sphere:

$$\int_0^R 2\pi r \sqrt{1 + \left(\frac{dy}{dx}\right)^2} dx \quad (1)$$

Note, this equation is cool.

# Itemization

Making lists of things!

- This is the first item

- *Here is a second item!*
- Here is a third item! It is only here for a moment
- **This one is in bold!**

# I like building blocks!

The first is a regular block, and the second is an alert! block.

## Regular Block

You should probably wear deodorant.

## Alerted Block

If you **don't** wear deodorant, you will stink.

## Example Block

Paul doesn't wear deoderant, and he is stinky.

# This frame has notes!

You must enable them though at the beginning of the document

- `\notetogglemode1` - Notes only

# This frame has notes!

You must enable them though at the beginning of the document

- `\notetogglemode1` - Notes only
- `\notetogglemode2` - Notes and slides side by side!
